**Title**: Herbicidal compositions containing bentazon and ALS inhibitor and ACCase inhibitor.

**Abstract**:
Herbicidal compositions comprising (a) bentazon-sodium and (b) an ALS inhibitor and (c) an ACCase inhibitor controls susceptible and resistant weeds in crops, e.g., rice, wheat, barley, oats, rye, sorghum, corn/maize, pastures, grasslands, rangelands, fallowland, turf, tree and vine orchards and IVM, but also additionally in ALS and ACC'ase tolerant crops.
HERBICIDAL COMPOSITIONS CONTAINING BENTAZON AND ALS INHIBITOR AND ACCASE INHIBITOR

Cross Reference to Related Applications

This application claims the benefit of U.S. Provisional Patent Application Serial No. 61/585844, filed January 12, 2012, the entirety of which is incorporated herein by reference.

Field

This disclosure concerns herbicidal compositions comprising and methods utilizing three herbicidal active ingredients, specifically (a) bentazon-sodium, (b) one ALS inhibitor and (c) one ACCase Inhibitor for controlling weeds, including in crop settings, e.g., rice, wheat, barley, oats, rye, sorghum, corn/maize, pastures, grasslands, rangelands, fallowland, turf, tree and vine orchards and IVM, as well as ALS and ACCase tolerant crops (such as, but not limited to, soybean, cotton, canola / oilseed rape, rice, cereals, corn, turf, etc.). In some embodiments, these compositions provide improved post-emergence herbicidal weed control in rice.

Background

The protection of crops from weeds and other vegetation which inhibit crop growth is a constantly recurring problem in agriculture. To help combat this problem, researchers in the field of synthetic chemistry have produced an extensive variety of chemicals and chemical formulations effective in the control of such unwanted growth. Chemical herbicides of many types have been disclosed in the literature and a large number are in commercial use.

In some cases, herbicidal active ingredients have been shown to be more effective in combination than when applied individually and this is referred to as "synergism." As described in the Herbicide Handbook of the Weed Science Society of America, Ninth Edition, 2007, p. 429 "synergism' [is] an interaction of two or more factors such that the effect when combined is greater than the predicted effect based on the response to each factor applied separately." The present disclosure is based in part on the discovery that penoxsulam, cyhalofop-butyl and bentazon, already known individually for their herbicidal efficacy, display a synergistic effect when applied in a three-way combination.

Summary

The present disclosure concerns herbicidal compositions comprising and methods utilizing herbicidally effective amounts of three herbicidal active ingredients, wherein the first herbicidal active ingredient is bentazon-sodium, the second herbicidal active ingredient an ALS Inhibitor and the third herbicidal active ingredient an ACCase Inhibitor. The compositions may also contain an agriculturally acceptable adjuvant and / or carrier.

-1-
The present disclosure also concerns herbicidal compositions for and methods of controlling the growth of undesirable vegetation, e.g., in monocot crops including rice, wheat, barley, oats, rye, sorghum, corn / maize, pastures, grasslands, rangelands, fallowland, turf, tree and vine orchards and IVM and, additionally, in ALS- and ACCase-tolerant crops (such as, but not limited to, soybean, cotton, canola/oilseed rape, rice, cereals, corn, turf, etc.).

**Detailed Description**

Provided herein are herbicidal compositions comprising herbicidally effective amounts of three herbicidal active ingredients, wherein the first herbicidal active ingredient is bentazon-sodium, the second herbicidal active ingredient is an ALS inhibitor and the third herbicidal active ingredient is an ACCase inhibitor.

Provided herein are methods of controlling undesirable vegetation comprising applying herbicidally effective amounts of three herbicidal active ingredients, wherein the first herbicidal active ingredient is bentazon-sodium, the second herbicidal active ingredient is an ALS inhibitor and the third herbicidal active ingredient is an ACCase inhibitor.

Exemplary ALS Inhibitors include, but are not limited to, penoxsulam, bispyribac-sodium, azimsulfuron, bensulfuron-methyl, chloransulam, clinosulfuron, diclosulam, ethoxysulfuron, flazasulfuron, florasulam, flumetsulam, halosulfuron-methyl, imazamox, imazethapyr, imazosulfuron, iofensulfuron, metazosulfuron, metsulfuron-methyl, orthosulfamuron, propyrisulfuron, pyrazosulfuron-ethyl, pyribenzoxyl, pyribitalid, pyriminobac-methyl, pyrimisulfan, pyroxsulam and triafamone.

Exemplary ACCase Inhibitors include, but are not limited to cyhalofop-butyl, fenoxaprop-P-ethyl, clodinafop-propargyl, diclofop-methyl, fluazifop-P-butyl, haloxyfop-methyl, propaquizafop, quizalofop-P-ethyl, clodimox, cycloxydim, profoxydim, sethoxydim, tepraloxydim, tralkoxydim and pinoxaden.

As used herein, penoxsulam is the common name for 2-(2,2-difluoroethoxy)-N-(5,8-dimethoxy[1,2,4]triazolo[1,5-c]pyrimidin-2-yl)-6-(trifluoromethyl)benzenesulfonamide and possesses the following structure:

As used herein, bispyribac-sodium is the common name for sodium 2,6-bis(4,6-dimethoxypyrimidin-2-ylxyloxy)benzoate and possesses the following structure:

![Bispyribac-Sodium Structure](image)

Its herbicidal activity is described in *The Pesticide Manual, Fifteenth Edition, 2009.* Exemplary uses of bispyribac-sodium include, but are not limited to, its use as a herbicide for the control of grasses, sedges and broad-leaved weeds. In one embodiment, bispyribac-sodium controls *Echinochloa* spp., in direct-seeded rice, and in another embodiment may also be used to stunt growth of weeds in non-crop situations.

Bentazon is the common name for 3-(1-methylethyl)-1H-2,1,3-benzothiadiazin-4(3H)-one 2,2-dioxide and possesses the following structure:

![Bentazon Structure](image)

Exemplary uses of bentazon include, but are not limited to, its use as a herbicide for the control of a wide range of economically important broadleaf and sedge weeds. Bentazon is also known as bentazone and bendioxide. In certain embodiments, it can be used as the acid itself or as an agriculturally acceptable salt or ester. An exemplary bentazon salt is the sodium salt.

Cyhalofop-butyl is the common name for (R)-butyl 2-[4-(4-cyano-2-fluorophenoxy)phenoxy]propanoate and possesses the following structure:

![Cyhalofop-butyl structure](image)

Exemplary uses of cyhalofop include, but are not limited to, its use as a herbicide for the post-emergence control of grass weeds in rice. It can be used as the acid itself or as an agriculturally acceptable salt or ester. An exemplary cyhalofop ester is the butyl ester.

Fenoxaprop-P-ethyl is the common name for (R)-ethyl-2-[4-(6-chloro-1,3-benzoxazol-2-yloxy)phenoxy]propanoate and possesses the structure:

![Fenoxaprop-P-ethyl structure](image)

Exemplary uses of fenoxaprop include, but are not limited to, its use as a herbicide for the post-emergence control of annual and perennial grass weeds in potatoes, beans, soya beans, beets, vegetables, peanuts, flax, oilseed rape and cotton; and (when applied with the herbicide safener mfenpyr-diethyl) annual and perennial grass weeds and wild oats in wheat, rye, triticale and, depending on ratio, in some varieties of barley. In some embodiments fenoxaprop is used as an ester, an exemplary ester being the P-ethyl ester.

The species spectra of bentazon-sodium, the ALS inhibitor and the ACCase Inhibitor, i.e., the weed species which the respective compounds control, are broad and highly complementary.

For example, it has been surprisingly found that a combination of penoxsulam plus cyhalofop-butyl plus bentazone-sodium salt exhibits a synergistic action in the control of barnyardgrass (*Echinochloa crus-galli*, ECHCG), Chinese sprangletop (*Leptochloa chinensis*, LEFCH), monochoria (*Monochoria vaginalis*, MOOVA), globe fringerush (*Fimbristylis miliacea*, FIMMI) and rice flatsedge (*Cyperus iria*;
CYPIR) at application rates equal to or lower than the rates of the individual compounds. It has been surprisingly found that a combination of penoxsulam plus fenoxaprop-P-ethyl plus bentazon-sodium salt exhibits a synergistic action in the control of bamyardgrass (Echinochloa crus-galli; ECHCG) and monochoria (Monochoria vaginalis, MOOVA) at application rates equal to or lower than the rates of the individual compounds. It has been surprisingly found that a combination of bispyribac-sodium plus cyhalofop-butyl plus bentazon-sodium salt exhibits a synergistic action in the control of bamyardgrass (Echinochloa crus-galli; ECHCG) at application rates equal to or lower than the rates of the individual compounds.

The term herbicide or herbicidal active ingredient is used herein to mean an active ingredient that kills, controls or otherwise adversely modifies the growth of plants. A herbicidally effective or vegetation controlling amount is an amount of active ingredient which causes an adversely modifying effect and includes deviations from natural development, killing, regulation, desiccation, retardation, and the like. The terms plants and vegetation include germinant seeds, emerging seedlings, plants emerging from vegetative propagules, and established vegetation.

In some embodiments, the compositions and methods provided herein are utilized to control weeds in crops, including but not limited to rice, wheat, barley, oats, rye, sorghum, corn/maize, pastures, grasslands, rangelands, fallowland, turf, tree and vine orchards and IVM, rights-of-way and in any ALS or ACCase tolerant crops.

The compositions and methods described herein can be used to control undesirable vegetation in glyphosate-tolerant-, glufosinate-tolerant-, dicamba-tolerant-, phenoxy auxin-tolerant-, pyridyloxy auxin-tolerant-, aryloxyphenoxypropionate-tolerant-, acetyl CoA carboxylase (ACCase) Inhibitor-tolerant-, imidazolinone-tolerant-, acetolactate synthase (ALS) inhibitor-tolerant-, 4-hydroxyphenyl-pyruvate dioxygenase (HPPD) inhibitor-tolerant-, protoporphyrinogen oxidase (PPO) Inhibitor-tolerant-, triazine-tolerant- and bromoxynil-tolerant crops (such as, but not limited to, soybean, cotton, canola / oilseed rape, rice, cereals, com, turf, etc), for example, in conjunction with glyphosate, glufosinate, dicamba, phenoxy auxins, pyridyloxy auxins, aryloxyphenoxypropionates, ACCase Inhibitors, Imidazolinones,ALS Inhibitors, HPPD inhibitors, PPO inhibitors, triazines, and bromoxynil. The compositions and methods may be used in controlling undesirable vegetation in crops possessing multiple or stacked traits conferring tolerance to multiple chemistries and/or inhibitors of multiple modes of action. In some embodiments, penoxsulam plus cyhalofop-butyl plus bentazon-sodium, penoxsulam plus fenoxaprop-P-ethyl plus bentazon-sodium, and bispyribac-sodium plus cyhalofop-butyl plus bentazon-sodium, and other bentazon-sodium combinations plus 1 ALS Inhibitor plus 1 ACCase Inhibitor are used in combination with herbicides that are selective for the crop being treated and which complement the spectrum of weeds controlled by these.
compounds at the application rate employed. In some embodiments, the compositions described herein and other complementary herbicides are applied at the same time, either as a combination formulation, as a tank mix, or as a sequential application.

The compositions and methods provided herein are utilized to control undesirable vegetation. Undesirable vegetation includes, but is not limited to, undesirable vegetation that occurs in rice, wheat, barley, oats, rye, sorghum, corn / maize, pastures, grasslands, rangelands, fallowland, turf, tree and vine orchards, IVM and rights-of-way.

In some embodiments, the methods provided herein are utilized to control undesirable vegetation in cereals. In certain embodiments, the undesirable vegetation is *Alopecurus myosuroides* Huds. (blackgrass, ALOMY), *Apera spica-venti* (L.) Beauv. (windgrass, APESV), *Avena fatua* L. (wild oat, AVEFA), *Bromus tectorum* L. (downy brome, BROTE), *Lolium multiflorum* Lam. (Italian ryegrass, LOLMU), *Phalaris minor* Retz. (littleseed canarygrass, PHAMI), *Poa annua* L. (annual bluegrass, POANN), *Setaria pumila* (Poir.) Roemer & J.A. Schultes (yellow foxtail, SETLU), *Setaria viridis* (L.) Beauv. (green foxtail, SETVI), *Cirsium arvense* (L.) Scop. (Canada thistle, CIRAR), *Galium aparine* L. (catchweed bedstraw, GALAP), *Kochia scoparia* (L.) Schrad.
In some embodiments, the compositions and methods provided herein are utilized to control undesirable vegetation in range and pasture, IVM and rights of way. In certain embodiments, the undesirable vegetation is *Ambrosia artemisiifolia* L. (common ragweed, AMBEL), *Cassia obtusifolia* (sickle pod, CASOB), *Centaurea maculosa* auct. non Lam. (spotted knapweed, CENMA), *Cirsium arvense* (L.) Scop. (Canada thistle, CIRAR), *Convolvulus arvensis* L. (field bindweed, CONAR), *Euphorbia esula* L. (leafy spurge, EPHES), *Lactuca serriola* L. (prickly lettuce, LACSE), *Melochia parviflora* (escoba blanca, MEOPA), *Plantago lanceolata* L. (buckhorn plantain, PLALA), *Rumex obtusifolius* L. (broadleaf dock, RUMOB), *Sida spinosa* L. (prickly sida, SIDSP), *Sinapis arvensis* L. (wild mustard, SINAR), *Sonchus arvensis* L. (perennial sowthistle, SONAR), *Solidago species* (goldenrod, SOOSS), *Taraxacum officinale* G.H. Weber ex Wiggers (dandelion, TAROF), *Trifolium repens* L. (white clover, TRFRE), or *Urtica dioica* L. (common nettle, URTDI).

In some embodiments, the compositions and methods provided herein are utilized to control undesirable vegetation consisting of grass, broadleaf and sedge weeds. In certain embodiments, the compositions and methods provided herein are utilized to control undesirable vegetation including *Cyperus, Echinochloa, Fimbristylis, Leptochloa* and *Monochoria*.

In some embodiments, the methods utilize bentazon-sodium, penoxsulam, and cyhalofop-butyrl, and the undesirable vegetation is *Cyperus, Echinochloa, Fimbristylis, Leptochloa, or Monochoria*. In some embodiments the undesirable vegetation is ECHCH, MOOVA, FIMMI, LEFCH, or CYPIR.

In some embodiments, the methods utilize bentazon-sodium, penoxsulam, and fenoxaprop-P-ethyl, and the undesirable vegetation is *Echinochloa or Monochoria*. In some embodiments the undesirable vegetation is ECHCH or MOOVA.

The methods employing the combination of penoxsulam plus cyhalofop-butyrl plus bentazon-sodium, penoxsulam plus fenoxaprop-P-ethyl plus bentazon-sodium and bispyribac-sodium plus cyhalofop-butyrl plus bentazon-sodium, or agriculturally acceptable salts or esters of any component, and the compositions described herein may also be employed to control herbicide resistant or tolerant weeds. Exemplary resistant or tolerant weeds include, but are not limited to, biotypes resistant or tolerant to acetolactate synthase (ALS) inhibitors, photosystem II inhibitors,
acetyl CoA carboxylase (ACCase) inhibitors, synthetic auxins, photosystem I inhibitors, 5-enolpyruvylshikimate-3-phosphate (EPSP) synthase inhibitors, microtubule assembly inhibitors, lipid synthesis inhibitors, protoporphyrinogen oxidase (PPO) inhibitors, carotenoid biosynthesis inhibitors, very long chain fatty acid (VLCFA) inhibitors, phytoene desaturase (PDS) inhibitors, glutamine synthetase inhibitors, 4-hydroxyphenyl-pyruvate-dioxygenase (HPPD) inhibitors, mitosis inhibitors, cellulose biosynthesis inhibitors, herbicides with multiple modes-of-action such as quinclorac, and unclassified herbicides such as arylaminopropionic acids, difenzoquat, endothall, and organoarsenicals. Exemplary resistant or tolerant weeds include, but are not limited to, biotypes with resistance or tolerance to multiple herbicides, multiple chemical classes, and multiple herbicide modes-of-action.

In some embodiments, the compositions described herein are applied as a post-emergence foliar application to immature, undesirable vegetation to achieve the maximum control of weeds, or applied directly into water to immature, undesirable vegetation to achieve the maximum control of weeds.

Herbicidal activity is exhibited by the compounds when they are applied directly to the plant, to the locus of the plant at any stage of growth or before planting or emergence or after emergence. The effect observed depends upon the plant species to be controlled, the stage of growth of the plant, the application parameters of dilution and spray drop size, the particle size of solid components, the environmental conditions at the time of use, the specific compound employed, the specific adjuvants and carriers employed, the soil type, and the like, as well as the amount of chemical applied. These and other factors can be adjusted as is known in the art to promote non-selective or selective herbicidal action. In some embodiments, the compositions described herein are applied to relatively immature undesirable vegetation to achieve the maximum control of weeds.

In some embodiments, the compositions comprise and methods utilize bentazon-sodium, penoxsulam, and cyhalofop-butyl. In some embodiments, the weight ratio of (a) bentazon-sodium to (b) penoxsulam to (c) cyhalofop-butyl is (a) 50 – 150 to (b) 0.5 – 1.5 to (c) 4 – 40. In another embodiment, the weight ratio is (a) 70 – 90 to (b) 1 to (c) 8 – 23.

In some embodiments, the compositions comprise and methods utilize bentazon-sodium, penoxsulam, and fenoxaprop-P-ethyl. In some embodiments, the weight ratio of (a) bentazon-sodium to (b) penoxsulam to (c) fenoxaprop-P-ethyl is (a) 50 – 100 to (b) 0.5 – 1.5 to (c) 0.5 – 1.5. In another embodiment, the weight ratio is (a) 75 to (b) 1 to (c) 1.

In some embodiments, the compositions comprise and methods utilize bentazon-sodium, bispyribac-sodium, and cyhalofop-butyl. In some embodiments, the weight ratio of (a) bentazon-
sodium to (b) bispyribac-sodium to (c) cyhalofop-butyl is (a) 25 to 75 (b) 0.5 – 1.5 to (c) 10 – 20. In another embodiment, the weight ratio is (a) 56 to (b) 1 to (c) 19.

The rate at which the composition is applied will depend upon the particular type of weed to be controlled, the degree of control required, and the timing and method of application. In general, the compositions of the disclosure can be applied at an application rate from about 113 grams active ingredient per hectare (g ai/ha) to about 2575 g ai/ha based on the total amount of active ingredients in the composition. In another embodiment, the compositions of the disclosure can be applied at an application rate from about 150 grams active ingredient per hectare (g ai/ha) to about 245 g ai/ha based on the total amount of active ingredients in the composition. Penoxsulam is applied at a rate from about 1 g ai/ha to about 50 g ai/ha, bispyribac-sodium is applied at a rate from about 4 g ai ha to about 75 g ai/ha, bentazon-sodium is applied at a rate from about 112 g ai/ha to about 2000 g ai/ha, cyhalofop-butyl is applied at a rate from about 37 g ai/ha to 500 g ai/ha and fenoxaprop-P-ethyl is applied at a rate from about 8 g ai/ha to 500 g ai/ha.

The components of the mixtures described herein can be applied either separately or as part of a multipart herbicidal system.

The mixtures of the present disclosure can be applied in conjunction with one or more other herbicides to control a wider variety of undesirable vegetation. When used in conjunction with other herbicides, the composition can be formulated with the other herbicide or herbicides, tank mixed with the other herbicide or herbicides or applied sequentially with the other herbicide or herbicides. Some of the herbicides that can be employed in conjunction with the synergistic composition described herein include: 2,4-D esters & amines, acetochlor, acifluorfen, aclonifen, AE0172747, alachlor, amidosulfuron, aminocyclopyrachlor, aminopyralid, aminotriazole, ammonium thiocyanate, anilfos, atrazine, azimsulfuron, benfuresate, bensulfuron-methyl, benthiocarb, bentobicyclon, benzonfenap, bifenox, bispyribac-sodium, bromacil, bromobutide, bromoxynil, butachlor, butafenacil, butralin, cafenstrole, carbetamide, carfentrazone-ethyl, chlorflurenol, chlorimuron, chlorpropham, cinosulfuron, clethodim, clodinafop-propargyl, clomazone, clomeprop, clorpyralid, cloransulam-methyl, cyclosulfamuron, cycloxydim, daimuron, dicamba, dichlobenil, dichloroprop-P, diclosulam, diflufenican, difluenzopyr, dimepiperate, dimethenamid, dimethenamid-p, diquat, dithiopyr, diuron, EK2612, EPTC, esprocarb, ET-751, ethoxysulfuron, etobenzanid, fenoxaprop, fenoxaprop-P-ethyl, fenoxaprop-ethyl + Isoxadifen-ethyl, fentrazamide, flazasulfuron, florasulam, fluazifop, fluazifop-P-butyl, flucetosulfuron (LGC-42153), flufenacet, flufenpyr-ethyl, flumetsulam, flumiclorac-pentyl, flumioxazin, fluometuron, flupyradifur, fluroxypyr, fluroxypyr methyl heptyl ester (MHE), fomesafen, foramsulfuron, fumiclorac, glufosinate, glufosinate-ammonium, glyphosate, halosulfuron, haloxyfop-methyl, haloxyfop-P-methyl, imazamethabenz, imazamox, imazapic,
imazapyr, imazaquin, imazethapyr, imazosulfuron, indanofan, indaziflam, iodosulfuron,ioxynil, ipfencarbazone (HOK-201), IR 5790, isoproturon, isoxaben, isoxaflutole, KUH-071, lactofen, linuron, ifensulfuron, MCPA, MCPA ester & amine, MCPP, MCPP ester & amine, mecoprop-P, mefenacet, mesosulfuron, mesotrione, metamifop, metazosulfuron (NC-620), metolachlor, metosulam, metribuzin, metulfuron, molinate, MSMA, napropamide, nicosulfuron, norflurazon, OK-9701, orthosulfamuron, oryzalin, oxadiargyl, oxadiazon, oxazichlomefene, oxyfluorfen, paraquat, pendimethalin, pentoxazone, pethoxamid, picloram, picolinic acid, pinoxaden, piperoxos, pretilachlor, primisulfuron, profoxydim, propachlor, propanil, propisulfuron, propyzamide, prosulfocarb, prosulfuron, pyraclostrobin, pyrazolinate, pyrazosulfuron, pyroxasulfone (KIN-485), pyroxsulam, quinclorac, quizalofop-P-ethyl, S-3252, saflufenacil, sethoxydim, simazine, SL-0401, SL-0402, S-metolachlor, sulcotrione, sulfentrazone, sulfosate, tebuthiuron, tefuryltrione (AVH-301), terbacil, thenylchlor, thiazopyr, thiobencarb, tralkoxydim, trifluralin, trifuralin, tritosulfuron, DE-729 (halauxifen-methyl) esters and amines.

The compositions of the present disclosure can, further, be used in conjunction with glyphosate, glufosinate, dicamba, imidazolinones, sulfonylureas, ACCase (aryloxyphenoxypropionate and cyclohexanediones) or 2,4-D on glyphosate-tolerant, glufosinate-tolerant, dicamba-tolerant, imidazolinone-tolerant, sulfonylurea-tolerant, ACCase tolerant and 2,4-D-tolerant crops. In some embodiments, the compositions described herein are used in combination with herbicides that are selective for the crop being treated and which complement the spectrum of weeds controlled by these compounds at the application rate employed. In other embodiments, the compositions of the present disclosure and other complementary herbicides are applied at the same time, either as a combination formulation or as a tank-mix.

The compositions of the present disclosure can be employed in combination with known herbicide safeners, such as benoxacor, benthiocarb, brassinolide, cloquintocet (mexyl), cyometrinil, daimuron, dichlormid, diclofop, dimepiperate, disulfoton, fenuron, fluroxypyr, flurazol, fluxofenim, furilazole, isoxadifen-ethyl, mefenpyr-diethyl, MG 191, MON 4660, naphthalic anhydride (NA), oxabetrinil, R29148 and N-phenyl-sulfonylbenzolic acid amides, to enhance their selectivity.

In practice, the compositions described herein are used in mixtures containing a herbicidally effective amount of the herbicidal components along with at least one agriculturally acceptable adjuvant or carrier. Suitable adjuvants or carriers should not be phytotoxic to valuable crops, particularly at the concentrations employed in applying the compositions for selective weed control.
in the presence of crops, and should not react chemically with herbicidal components or other composition ingredients. Such mixtures can be designed for application directly to weeds or their locus or can be concentrates or formulations that are normally diluted with additional carriers and adjuvants before application. They can be solids, such as, for example, dusts, granules, water dispersible granules, or wettable powders, or liquids, such as, for example, emulsifiable concentrates, solutions, emulsions or suspensions.

Suitable agricultural adjuvants and carriers that are useful in preparing the herbicidal mixtures described herein are well known to those skilled in the art. Some of these adjuvants include, but are not limited to, crop oil concentrate (mineral oil (85%) + emulsifiers (15%)); nonylphenol ethoxylate; benzylcocoalkyldimethyl quaternary ammonium salt; blend of petroleum hydrocarbon, alkyl esters, organic acid, and anionic surfactant; C\textsubscript{9}-C\textsubscript{11} alkylpolyglycoside; phosphated alcohol ethoxylate; natural primary alcohol (C\textsubscript{12}-C\textsubscript{18}) ethoxylate; di-sec-butylphenol EO-PO block copolymer; polysiloxane-methyl cap; nonylphenol ethoxylate + urea ammonium nitrate; emulsified methylated seed oil; tridecyl alcohol (synthetic) ethoxylate (8EO); tallow amine ethoxylate (15 EO); PEG(400) dioleate-99.

Liquid carriers that can be employed include water, toluene, xylene, petroleum naphtha, crop oil, acetone, methyl ethyl ketone, cyclohexanone, trichloroethylene, perchloroethylene, ethyl acetate, amyl acetate, butyl acetate, propylene glycol monomethyl ether and diethylene glycol monomethyl ether, methyl alcohol, ethyl alcohol, isopropyl alcohol, amyl alcohol, ethylene glycol, propylene glycol, glyc erine, N-methyl-2-pyrrolidinone, N,N-dimethyl alkylamides, dimethyl sulfoxide, liquid fertilizers and the like. In some embodiments, water is used for the dilution of concentrates.

Suitable solid carriers include talc, pyrophyllite clay, silica, attapulgus clay, kaolin clay, kieselguhr, chalk, diatomaceous earth, lime, calcium carbonate, bentonite clay, Fuller’s earth, cottonseed hulls, wheat flour, soybean flour, pumice, wood flour, walnut shell flour, lignin, and the like.

In some embodiments, it is desirable to incorporate one or more surface-active agents into the compositions of the present disclosure. Such surface-active agents are advantageously employed in both solid and liquid compositions, especially those designed to be diluted with carrier before application. The surface-active agents can be anionic, cationic or nonionic in character and can be employed as emulsifying agents, wetting agents, suspending agents, or for other purposes. Surfactants conventionally used in the art of formulation and which may also be used in the present formulations are described, *Inter alia*, in “McCutcheon’s Detergents and Emulsifiers Annual,” MC Publishing Corp., Ridgewood, New Jersey, 1998 and in “Encyclopedia of Surfactants,” Vol. I-III, Chemical Publishing Co., New York, 1980-81. Typical surface-active agents include salts of alkyl...
sulfates, such as diethanolammonium lauryl sulfate; alkylaryl sulfonate salts, such as calcium
dodecylbenzenesulfonate; alkylphenol-alkylene oxide addition products, such as nonylphenol-C\textsubscript{18}
ethoxylate; alcohol-alkylene oxide addition products, such as tridecyl alcohol-C\textsubscript{18} ethoxylate; soaps,
such as sodium stearate; alkylnaphthalene-sulfonate salts, such as sodium dibutyl-
naphthalenesulfonate; dialkyl esters of sulfo succinate salts, such as sodium di(2-ethylhexyl)
sulfo succinate; sorbitol esters, such as sorbitol oleate; quaternary amines, such as lauryl
trimethylammonium chloride; polyethylene glycol esters of fatty acids, such as polyethylene glycol
steарате; block copolymers of ethylene oxide and propylene oxide; salts of mono and dialkyl
phosphate esters; vegetable oils such as soybean oil, rapeseed / canola oil, olive oil, castor oil,
sunflower seed oil, coconut oil, corn oil, cottonseed oil, linseed oil, palm oil, safflower oil,
sesame oil, tung oil and the like; and esters of the above vegetable oils.

Other additives commonly used in agricultural compositions include compatibilizing agents,
antifoam agents, sequestering agents, neutralizing agents and buffers, corrosion inhibitors, dyes,
odorants, spreading agents, penetration aids, sticking agents, dispersing agents, thickening agents,
freezing point depressants, antimicrobial agents, and the like. The compositions may also contain
other compatible components, for example, other herbicides, plant growth regulants, fungicides,
insecticides, and the like and can be formulated with liquid fertilizers or solid, particulate fertilizer
carriers such as ammonium nitrate, urea and the like.

In some embodiments, the concentration of the active ingredients in the synergistic
composition of the present disclosure is from 0.1 to 98 percent by weight, and in other
embodiments, concentrations from 10 to 90 percent by weight are employed. In certain
embodiments in which the compositions are designed to be employed as concentrates, the active
ingredients may be present in a concentration from about 5 to about 98 weight percent, and in other
embodiments from about 10 to about 90 weight percent. Such compositions may be diluted with an
inert carrier, such as water, before making a postemergence, foliar application to exposed weed
and crop foliage, or may be applied as a dry or liquid formulation directly into flooded rice fields or
other aquatic conditions. In some embodiments the diluted compositions are applied as a
postemergence, foliar application to weeds or the locus of weeds and contain from about 0.02 to
about 20 weight percent active ingredient and in other embodiments contain from about 0.04 to
about 10 weight percent active ingredient.

The present compositions can be applied to weeds or their locus by the use of conventional
ground or aerial dusters, sprayers, and granule applicators, by addition to irrigation or paddy water,
and by other conventional means known to those skilled in the art.
The described embodiments and following examples are for illustrative purposes and are not intended to limit the scope of the claims. Other modifications, uses, or combinations with respect to the compositions described herein will be apparent to a person of ordinary skill in the art without departing from the spirit and scope of the claimed subject matter.

Evaluation of Postemergence Herbicidal Activity of Mixtures in the Field

Field trials were conducted in Vietnam and Taiwan in cultivated direct-seeded rice using standard herbicide small plot research methodology. Plots varied from 1 x 2 meter (m) to 4 x 5 m (width x length) with 3 – 4 replicates per treatment. The rice crop was grown using normal cultural practices for fertilization, seeding, watering, flooding and maintenance to ensure good growth of the crop and the weeds.

All treatments in the field trials were applied using a backpack air sprayer with flat fan nozzles calibrated to apply 320 to 450 L/ha spray volume at approximately 30 PSI. Commercially available products of penoxsulam (Clipper 250D), bispyribac-sodium (Nominee 100SC), bentazon-sodium (Basagran 480SL), cyhalofop-butyl (Clincher 100EC), and fenoxaprop-P-ethyl (Whip S) were mixed in water at appropriate formulated product rates to achieve the desired rates based on a unit area of application (hectare) to achieve the desired rates as shown. Treatments were rated at 7 to 42 days after application (DAA) as compared to the untreated control plants. Visual weed control was scored on a scale of 0 to 100 percent where 0 corresponds to no injury and 100 corresponds to complete kill.

Tables 1 to 5 demonstrate the herbicidal synergistic efficacy of bentazon-sodium mixes with one ALS inhibitor + one ACCase inhibitor tank mixes on weed control. All treatment results, both for the single product and mixtures, are an average of 3 to 4 replicates and the tank mix interactions are significant at the P>0.05 level.

Colby's equation was used to determine the herbicidal effects expected from the mixtures (Colby, S.R. Calculation of the synergistic and antagonistic response of herbicide combinations. Weeds 1967, 15, 20-22.).

The following equation was used to calculate the expected activity of mixtures containing two active ingredients, A and B:

\[
\text{Expected} = A + B + C - (AB + AC + BC)/100 + (ABC)/10,000
\]

A = observed efficacy of active ingredient A at the same concentration as used in the mixture.
B = observed efficacy of active ingredient B at the same concentration as used in the mixture.

C = observed efficacy of active ingredient C at the same concentration as used in the mixture.

Some of the compounds tested, application rates employed, plant species tested, and results are given in Tables 1-5. All comparisons are an average of 3 to 4 replicates and are significant at the P>0.05 level.

-18-
WHAT IS CLAIMED IS:

1. A herbicidal composition comprising three herbicidal active ingredients, wherein the first herbicidal active ingredient is bentazon-sodium, the second herbicidal active ingredient is an ALS inhibitor, and the third herbicidal active ingredient is an ACCase inhibitor.

2. The composition of claim 1, wherein the ALS inhibitor is penoxsulam, bispyribac-sodium, azimsulfuron, bensulfuron-methyl, chloransulam, cinosulfuron, diclosulam, ethoxysulfuron, flazasulfuron, florasulfuron, flumetsulam, halosulfuron-methyl, imazamox, imazethapyr, imazosulfuron, iofensulfuron, metazosulfuron, metsulfuron-methyl, orthosulfamuron, pyroxsulfuron, pyrazosulfuron-ethyl, pyribenzoxim, pyrflitalid, pyriminobac-methyl, pyrimisulfan, pyroxasulfuron or triafamone.

3. The composition of claim 1, wherein the ACCase inhibitor is cyhalofop-butyl, fenoxaprop-P-ethyl, clodinafop-propargyl, diclofop-methyl, fluazifop-P-butyl, haloxyfop-methyl, propaquizafop, quinalofop-P-ethyl, dethodim, cycloxydim, profoxydim, sethoxydim, tepraloxydim, tralkoxydim or pinoxaden.

4. The composition of claim 1, wherein ALS inhibitor is penoxsulam and the ACCase inhibitor is cyhalofop butyl.

5. The composition of claim 3, wherein the weight ratio of (a) bentazon-sodium to (b) penoxsulam to (c) cyhalofop-butyl is (a) 50 – 150 to (b) 0.5 – 1.5 to (c) 4 – 40.

6. The composition of claim 3, wherein the weight ratio of (a) bentazon-sodium to (b) penoxsulam to (c) cyhalofop-butyl is (a) 70 – 90 to (b) 1 to (c) 8 – 23.

7. The composition of claim 1, wherein the ALS inhibitor is penoxsulam and the ACCase inhibitor is fenoxaprop-P-ethyl.

8. The composition of claim 6, wherein the weight ratio of (a) bentazon-sodium to (b) penoxsulam to (c) fenoxaprop-P-ethyl is (a) 50 – 100 to (b) 0.5 – 1.5 to (c) 0.5 – 1.5.

9. The composition of claim 6, wherein the weight ratio of (a) bentazon-sodium to (b) penoxsulam to (c) fenoxaprop-P-ethyl is (a) 75 to (b) 1 to (c) 1.

10. The composition of claim 1, wherein the ALS inhibitor is bispyribac-sodium and the ACCase inhibitor is cyhalofop-butyl.

11. The composition of claim 9, wherein the weight ratio of (a) bentazon-sodium to (b) bispyribac-sodium to (c) cyhalofop-butyl is (a) 25 to 75 (b) 0.5 – 1.5 to (c) 10 – 20.

12. The composition of claim 9, wherein the weight ratio of (a) bentazon-sodium to (b) bispyribac-sodium to (c) cyhalofop-butyl is (a) 56 to (b) 1 to (c) 19.
13. The composition of claim 1, further comprising an agriculturally acceptable adjuvant or carrier.

14. A method of controlling undesirable vegetation comprising contacting the vegetation or the locus thereof with or applying to the soil or water to prevent the emergence or growth of vegetation a herbicidally effective amount of the composition of claim 1.

15. A method of controlling undesirable vegetation comprising contacting the vegetation or the locus thereof with or applying to the soil or water to prevent the emergence or growth of vegetation a herbicidally effective amount of three herbicidal active ingredients, wherein the first herbicidal active ingredient is bentazon-sodium, the second herbicidal active ingredient is an ALS Inhibitor, and the third herbicidal active ingredient is an ACCase Inhibitor.

16. The method of claim 14, wherein:

(a) the ALS Inhibitor is penoxsulam, bispyribac-sodium, azimsulfuron, bensulfuron-methyl, chloransulam, cinosulfuron, diclosulam, ethoxysulfuron, flazasulfuron, florasulam, flumetsulam, halosulfuron-methyl, imazamox, imazethapyr, imazosulfuron, lofensulfuron, metazosulfuron, metsulfuron-methyl, orthosulfamuron, propyrisulfuron, pyrazosulfuron-ethyl, pyribenzoic acid, pyrimidobac-methyl, pyrimisulfan, pyroxsulam or triaflumuron; and

(b) the ACCase Inhibitor is cyhalofop-butyl, fenoxaprop-P-ethyl, clodinafop-propargyl, diclofop-methyl, fluazifop-P-butyl, haloxyfop-methyl, propaquizafop, quizalofop-P-ethyl, dethodim, cycloxydim, profoxydim, sethoxydim, tepraloxydim, tralkoxydim or pinoxaden.

17. The method of claim 14, wherein the ALS Inhibitor is penoxsulam or bispyribac-sodium and the ACCase Inhibitor is cyhalofop-butyl or fenoxaprop-P-ethyl.

18. The method of claim 14, wherein ALS Inhibitor is penoxsulam and the ACCase inhibitor is cyhalofop butyl.

19. The method of claim 14, wherein the ALS Inhibitor is penoxsulam and the ACCase inhibitor is fenoxaprop-P-ethyl.

20. The method of claim 14, wherein the ALS inhibitor is bispyribac-sodium and the ACCase inhibitor is cyhalofop-butyl.

21. The method of claim 14, wherein the undesirable vegetation is controlled in the presence of rice crops.
