**CLARIFICATION DU REGLEMENT RELATIF A L'EXTENSION DES DROITS
SUITE A UNE NOUVELLE ADHESION A L'ACCORD DE BANGUI**

RESOLUTIONN°47/32

**LE CONSEIL D'ADMINISTRATION
DE L'ORGANISATION AFRICAINE DE LA PROPRIETE INTELLECTUELLE**

- Vu L'accord portant révision de l'accord de Bangui du 02 Mars 1977 instituant une Organisation Africaine de la Propriété Intellectuelle et ses annexes ;
- Vu Les dispositions des articles 18 et 19 dudit Accord relatives Aux attributions et pouvoirs du Conseil d'Administration ;

ADOpte la clarification du règlement du 04 décembre 1988 relatif à l'extension des droits suite à une nouvelle adhésion à l'Accord de Bangui ci-après :

Article 1er :

Le Règlement du 04 décembre 1988 relatif à l'extension des droits suite à une nouvelle adhésion à l'Accord de Bangui est réaménagé ainsi qu'il suit :

«Article 5 (nouveau) :

Les titulaires des titres en vigueur à l'Organisation avant la production des effets de l'adhésion d'un Etat à l'accord de Bangui ou ceux dont la demande a été déposée avant cette date et qui

voudront étendre la protection dans ces Etats doivent formuler une demande d'extension à cet effet auprès de l'Organisation suivant les modalités fixées aux articles 6 à 18 ci-dessous.
Le renouvellement de la protection des titres qui n'ont pas fait l'objet d'extension avant l'échéance dudit renouvellement entraîne une extension automatique des effets de la protection à l'ensemble du territoire OAPI».

Le reste sans changement.

Article 2 :

La présente clarification, qui entre en vigueur à compter du 1 er janvier 2008, s'applique aussi aux demandes d'extension en instance et sera publiée au Bulletin Officiel de l'Organisation.

Fait à Bangui le 17 décembre 2007

(54) Compounds and extracts from *Gnetum africanum* and anti-Inflammatory activity related thereto.

(72) ROBERT, Carole; WEHNER, Sue.

(73) Pharmafri-Can Inc.(CA)

(74) Cabinet Spoor & Fisher Inc. Ngwafor & Partners, Blvd. du 20 Mai, Immeuble Centre Commercial de l'Hôtel Hilton, 2^e Etage, Porte 208A, B.P. 8211, YAOUNDE (CM).

(57) The invention relates to extracts and compositions from *Gnetum africanum* and methods for obtaining the same . More particularly, described herein are compounds and extracts deriving from *Gnetum africanum* having anti-inflammatory activities and methods of using same for the prevention and/or treatment of inflammation reactions in humans and animals. The invention also encompasses cosmetic and pharmaceutical compositions which comprise such extracts and/or compounds.

(57) The invention relates to extracts and compositions from *Gnetum africanum*. It also concerns plant extracts enriched in resveratrol and methods for obtaining the same. Described herein are processed plant materials which comprise about 20 µg resveratrol per gram of dried plant material and plant extracts which comprise at least about 0.002% w/w resveratrol. Also described are resveratrol glycosides and compositions comprising same. The invention further encompasses food products, nutraceutical products, pharmaceutical compositions which comprise processed plant materials, plant extracts and/or resveratrol glycosides.

(57) The present invention relates to the use of a Severe Combined T-B-Immune Deficient (SCID) mouse engrafted with human immunocompetent cells (Hu-SCID-mouse) as an animal model for the evaluation of the effectiveness of an HIV vaccine. Furthermore, the present invention relates to a method for the evaluation of an HIV vaccine, wherein a Hu-SCID-mouse of the invention is inoculated with the HIV vaccine and thereafter challenged with HI-virus. The invention also relates to novel HIV vaccine compositions, which can be evaluated using the animal model.

(57) An offshore structure comprises a base configured to be secured to the sea floor. In addition, the offshore structure comprises an elongate stem having a longitudinal axis, a first end distal the base and a second end pivotally coupled to the base. Further, the offshore structure comprises an upper module coupled to the first end of the stem. The upper module includes a variable ballast chamber. Still further, the offshore structure comprises a first ballast control conduit in fluid communication with the variable ballast chamber of the upper module. The first ballast control conduit is configured to supply a gas to the variable ballast chamber of the upper module and vent the gas from the variable ballast chamber of the upper module. Moreover, the offshore structure comprises a deck mounted to the upper module.

 (72) SCIBOLA, Luciano; FAVILLI, Stefano.
 (73) SIME SRL(IT)
 (74) SCP NICO HALLE &Co. LAW FIRM, B.P. 4876, DOUALA (CM).

(57) A mass exchange column (60) for exchanging mass between a first gaseous or liquid stream (24) and a second liquid stream (25), comprising a vertical elongated container (11) divided in at least two longitudinal exchange chambers (75, 76) by a preferably vertical dividing wall (85), and a longitudinal passageway (86), arranged in a proximity (15) of the dividing wall (85), preferably at least partially arranged within the dividing wall (85), for conveying the first stream (24) between an outlet port (12) of the first chamber (75) and the inlet port (13) of the second chamber (76), wherein (86) a phase separation means is provided (40) along the passageway, which is adapted to receive the first stream (24) and to separate it into a main liquid or gaseous portion (27) as the first stream (24) and a secondary portion (27') that contains a liquid phase formed by condensation of one part of said stream (24) within said passageway (86), or due to an entrainment by said first stream (24) during the contact with said second stream (25) liquid. In a particular exemplary embodiment, the dividing

wall (85) comprises two parallel walls (21,22) and a hollow space (86') defined by the two parallel walls (21,22), and the passageway (86) comprises a portion of this hollow space (86') that is limited by the two parallel walls (21,22). This way, it is not necessary to provide ducts to allow the passage of a stream (24) that has to be consecutively treated in the two chambers (75,76), which reduces installation time and costs of the column (60), and limits possible leakage points. Furthermore, it is possible to feed the liquid portion and/or the gas portion of the first stream (24) separately into the second chamber (76), into convenient sections of the second chamber (76), in order to limit the extension of such contact means as trays or packings that are required for the separation which takes place within the second chamber (76).

(73) TOTAL S.A.(FR)

(74) Cabinet EKANI-CONSEILS, B.P. 5852, YAOUNDE (CM).

(57) L'invention concerne un procédé de traitement d'eau, comprenant :

- la filtration de l'eau dans une unité de filtration membranaire comprenant au moins un module de filtration membranaire;
- la collecte d'un perméat et la collecte d'un rétentat en sortie du module de filtration membranaire;
- le prélèvement de matières solides et / ou d'hydrocarbures contenus dans le rétentat, pour fournir un rétentat traité;
- le recyclage du rétentat traité en entrée du module de filtration membranaire;
- la fourniture d'un flux d'eau traitée issu du perméat du ou des modules de filtration membranaire.

L'invention concerne également une installation adaptée à la mise en oeuvre de ce procédé.

(54) Reinforcement bar and method for manufacturing same.

(72) STANDAL, Per, Cato; MILLER, Leonard, W.

(73) ReforceTech Ltd.(IE)

(74) Cabinet Spoor & Fisher Inc. Ngwafor & Partners, Blvd. du 20 Mai, Immeuble Centre Commercial de l'Hôtel Hilton, 2^e Etage, Porte 208A, B.P. 8211, YAOUNDE (CM).

(57) The invention relates to reinforcement bars for concrete structures, comprising a large number of continuous, parallel fibers, preferably made of basalt, carbon, glass fiber, or the like, embedded in a cured matrix, the bars preferably having an average length of 20 mm to 200 mm, and an average diameter of 2 mm to 10 mm, each bar being made of at least one fiber bundles comprising a number of parallel, preferably straight fibers having a cylindrical cross section and said bars being provided with a surface shape and/or texture which contributes to good bonding with the concrete.

At least a part of the surface of each bar being deformed prior to or during the curing stage of the matrix by means of :

a) one or more strings of an elastic or inelastic, but tensioned material being helically wound around said at least one bundle of parallel, straight fibers prior to curing of the matrix in which the fibers are embedded, maintaining the fibers in an parallel state during curing and providing an uneven external surface in a longitudinal direction of the reinforcement bars, and/or

b) at least one deformed section and/or at least one end of each reinforcement bar; thereby producing a roughened surface. The invention also relates to a method for manufacturing reinforcement bars and for use of such short fibers.

(57) A process for extracting heavier components, e.g., NGL from liquid/fluid streams such as Rich LNG (RLNG) stream(s) with the streamlined economy. The process involves heating the RLNG stream in heat exchanger(s) (LNGX) against column overhead vapour stream; not requiring separation of Feed streams into feed and reflux by splitting either pre- or post- of heat LNGX. The source liquid RLNG is processed producing liquid NGL and at same time returning purified Lean LNG (LLNG) product in its Liquid LNG form. The process operates essentially without the need for compression equipment. The process further provides without compressors vaporized natural

gas at pipeline pressure and specifications. This is a system that can flexibly change product compositions and specifications of product NGL/Lean LNG/Pipeline Gas and operate in both Pipeline Specification deep 99% Ethane (C2) Extraction and Ethane (C2) Rejection NGL recovery modes with economy of equipment and energy requirements.

- (57) To provide a sub headlight unit for use in a vehicle that leans into turns, by which occurrence of a situation where a rider feels uncomfortable about a change in a illumination range can be suppressed.

[Solution]

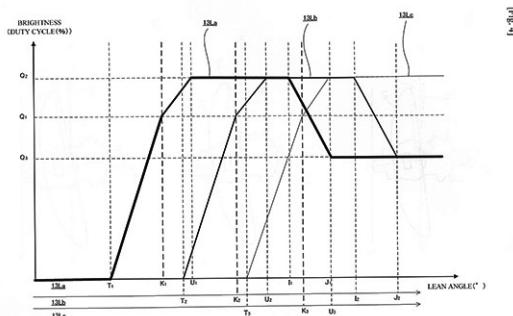

A sub headlight unit for use in a vehicle that leans into turns, wherein

the sub headlight unit includes a sub headlight source that illuminates, at one side with respect to a width direction of the vehicle, an area ahead and outward of the vehicle with respect to the width direction of the vehicle,

the brightness of the sub headlight light source changes in accordance with a lean angle of the vehicle,

when the lean angle of the vehicle leaning to the one side with respect to the width direction of the vehicle reaches a reference value that is set for the sub headlight light source, the sub headlight source lights up with a first brightness, and in a period from when the lean angle of the vehicle reaches a lower value that is less than the reference value to when the lean angle of the vehicle reaches the reference value, the sub headlight light source lights up with a brightness lower than the first brightness.

(57) This process comprises using unconventional processing of hydrocarbons, e.g. natural gas, for recovering C2+ and NGL hydrocarbons that meet pipeline specifications, without the core high capital cost requirement of a demethanizer column, which is central to and required by almost 100% of the world's current NGL recovery technologies. It can operate in ethane extraction or ethane rejection modes. The process uses only heat exchangers, compression and simple separation vessels to achieve specification ready NGL. The process utilizes cooling the natural gas, expansion cooling, separating the gas and liquid streams, recycling the cooled streams to exchange heat and recycling selective composition bearing streams to achieve selective extraction of hydrocarbons, in this instance being NGLs. The compactness and utility of this process makes it feasible in offshore applications as well as to implementation to retrofit/revamp or unload existing NGL facilities. Many disparate processes and derivatives are anticipated for its use.

(74) Cabinet Spoor & Fisher Inc. Ngwafor & Partners, Blvd. du 20 Mai, Immeuble Centre Commercial de l'Hôtel Hilton, 2^e Etage, Porte 208A, B.P. 8211, YAOUNDE (CM).

(57) Zinc and lead are usually concomitantly present in Zn-Pb ores and tailings. A novel non-polluting hydrometallurgical process for selectively leaching and recovering zinc (Zn) from a composite lead (Pb) and zinc sulphide containing mineral, crushed untreated rock or unconsolidated mineral particles, mill tailings and/or agglomerated or unagglomerated sulphidic zinc containing waste material without necessitating smelting and refining operation has been developed. A combination of selected oxidant and alkali metal

hydroxide has been found effective. A leachant consisting of e.g. a mixture of sodium hydroxide (NaOH) and sodium hypochlorite (NaOCl) is employed to selectively dissolve zinc sulphide at high pH at standard temperature and pressure (STP). The kinetics of leaching along with the effect of varying concentration (preferably of sodium hydroxide and sodium hypochlorite) were systematically investigated. Feed ore containing diverse set of minerals e.g. sulphides and carbonates can also be conveniently treated to selectively and almost quantitatively recover zinc as high purity zinc carbonate. This technology can be employed either in-situ or ex-situ based on the amenability of a particular type of mineral deposit or feed ore.

(57) La présente invention concerne un procédé de séparation entre la partie liquide et les matières en suspension d'une boue alimentées en flux continu à un débit $Q_{EB} = V/\text{heure}$. Le flux étant divisé en au moins deux flux partiels, on les projette l'un sur l'autre dans un enceinte fermée de volume $v < V/20$ en y injectant simultanément de l'air à un débit d , en maintenant la pression dans l'enceinte en surpression, puis on laisse décanter les matières en suspension du flux ainsi traité dans un récipient de récupération dans

lequel la partie solide ou gâteau tombe en partie basse du récipient en se séparant de la partie liquide que l'on vide en continu.

(73) YOHOU Gnago Alain, 01 B.P. 10400, ABIDJAN 01 (CI).

(57) L'invention concerne une crème antiseptique dermique préconisée pour le traitement d'appoint des affections cutanées des muqueuses et des plaies infectées.

Cette crème est constituée de : stéarine, isoprophylmyristate, amande douce, B.H.A., karité, vaseline blanche, huile de vaseline, cétystéarylque, triéthanolamine, extrait de girofle, benzoate de sodium, ricin calciné, salicylate de méthyl, alcool éthylique, menthol, camphre, acide ascorbique, parfum et eau purifiée.

Le ricin calciné, extrait de girofle et acide ascorbique sont les molécules actives de cette crème dont le pH est compris entre 5,5 et 6,5.

(57) In the production of alumina from aluminum hydroxide,

a) aluminum hydroxide is purified with washing water in a hydrate filter,

b) the purified aluminum hydroxide is at least partly dried and/or precalcined in at least one preheating stage,

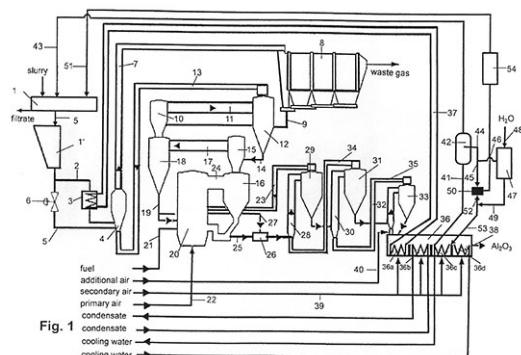

c) this pretreated aluminum hydroxide is calcined in a fluidized-bed reactor to obtain alumina,

d) the alumina obtained is cooled in at least one indirect cooling stage using water as coolant,

e) the steam (D) obtained from the cooling water due to the heat transfer in the indirect cooling stage is separated from the liquid fraction (A) of the exit stream from the cooling stage (E),

f) and at least one partial stream (T) of the liquid fraction (A) is guided to the hydrate filter and used there as washing water for purifying the aluminum hydroxide in the hydrate filter.

In accordance with the invention, an additional water stream (Z) is added to the partial stream (T) of the liquid fraction (A) guided to the hydrate filter and the mixing ratio of the two streams (T, Z) is adjusted such that the washing water stream (W) resulting therefrom has a constant maximum temperature value below the boiling point of water and the volume flow required by the hydrate filter as washing water.
